Preface

1 Introduction

2 Entropy and Capacity

2.1 Introduction

2.2 Information content, Entropy

2.2.1 Entropy of memoryless sources

2.2.2 Markov chains

2.2.3 Entropy of Markov information sources

2.3 Channel capacity of constrained channels . . .

2.3.1 Capacity of Markov information sources

2.3.2 Sources with variable-length symbols

3 Spectral Analysis

3.1 Introduction

3.2 Stochastic processes

3.2.1 Stationary processes

3.2.2 Cyclo-stationary processes

3.3 Spectra of Markov sources

3.4 Description of encoder models

3.5 Spectra of block-coded signals

3.5.1 Spectral analysis of Moore-type encoders

3.5.2 Spectrum of memoryless block codes

4 Runlength-limited Sequences: Theory

4.1 Introduction

4.2 Counting (dk) sequences

4.3 Asymptotic information rate

4.3.1 State-transition matrix description

4.3.2 Useful properties

4.4 Maxentropic RLL sequences

4.4.1 Spectrum of maxentropic RLL sequences

4.4.2 Comparison of results.

4.5 Other runlength constraints

4.5.1 Prefix-synchronized RLL sequences

4.5.2 Asymmetrical runlength constraints

4.5.3 MTR constraints

4.5.4 RLL sequences with multiple spacings

4.5.5 ($O, G/l$) sequences

4.6 Weak constraints

4.6.1 Capacity of the weakly dk -constrained channel

4.7 Multi-level RLL Sequences

4.8 Two-dimensional RLL constraints

4.9 Appendix: Computation of the spectrum

5 RLL Block Codes

5.1 Introduction

5.2 RLL (d, k) block codes

5.2.1 Modified frequency modulation, MFM

5.3 Block codes of minimum length

5.3.1 Franaszek's recursive elimination algorithm

5.3.2 State-independent decoding

5.4 Block codes based on ($dklr$) sequences

5.4.1 Generating functions

5.4.2 Constructions 1 and 2

5.5 Optimal block codes

5.5.1 Set-concatenation

5.6 Examples of RLL (d, k) block codes

5.6.1 EFM .

5.6.2 Rate 8/9, (0, 3) code

5.6.3 Other k -constrained codes

5.6.4 Sequence replacement technique

5.6.5 High-rate (klr) codes with uncoded symbols

5.7 Block-decodable RLL Codes

5.8 Almost block-decodable codes

5.8.1 Three Position Modulation (3PM) code

5.8.2 Constructions 3, 4, and 5

5.8.3 Generalized construction

5.8.4 Results and comparisons

5.9 Appendix: Generating functions

6 Enumerative coding

6.1 Introduction

6.2 Basics of enumeration

6.3 Enumeration of ($dklr$) sequences

6.3.1 Enumeration using floating-point arithmetic

6.3.2 Effects of floating point arithmetic

6.3.3 Very long block codes

6.3.4 Application to (k)-constrained sequences

6.4 Error propagation

6.5 Alternatives to standard codes

6.5.1 Burst error correction

6.6 Appendix: Asymptotics

7 Sliding-Block Codes

7.1 Introduction

7.2 Description of a sliding-block decoder

7.3 Variable-length (VL) codes

7.3.1 Synchronous variable-length RLL codes

7.3.2 Examples of synchronous VL codes

- 7.4 Look-ahead encoding technique
 - 7.4.1 Rate 273, (1,7) code
- 7.5 Sliding-block algorithm
 - 7.5.1 Higher-order edge graphs
 - 7.5.2 State splitting
- 7.6 Baldwin codes
 - 7.6.1 Encoder description
- 7.7 Immink codes
 - 7.7.1 Encoder description, $d=1$ case
 - 7.7.2 Encoder description, $d=2$ case
 - 7.7.3 Very efficient coding schemes
- 7.8 Discussion

8 Dc-balanced Codes

- 8.1 Introduction
- 8.2 Preliminaries
 - 8.2.1 Capacity of de-constrained sequences
 - 8.2.2 Spectra of maxentropic sequences
- 8.3 Performance assessment
- 8.4 Simple coding schemes
 - 8.4.1 Zero-disparity coding schemes
 - 8.4.2 Low-disparity coding schemes
 - 8.4.3 Polarity switch method .
- 8.5 Computation of the spectrum
- 8.6 Performance appraisal
 - 8.6.1 Efficiency of simple codes
- 8.7 High rate de-balanced codes
- 8.8 Dc-free code with odd codeword length
 - 8.8.1 Alternative definition of RDS
- 8.9 Balancing of code words
- 8.10 Appendix .
 - 8.10.1 Computation of the sum variance
 - 8.10.2 Computation of the correlation

9 Higher-Order Spectral Zeros

- 9.1 Introduction
- 9.2 Preliminaries
- 9.3 Enumeration of sequences
- 9.4 Coding with zero-disparity code words
 - 9.4.1 Spectra of zero-disparity code words
- 9.5 State-dependent encoding
- 9.6 Higher-order de-constrained codes

10 Guided Scrambling

- 10.1 Introduction
- 10.2 Guided scrambling basics.

- 10.2.1 Guided scrambling
- 10.3 Analysis of multi-mode dc-free codes
 - 10.3.1 The random drawing model
 - 10.3.2 Transition probabilities of the finite-state machine
 - 10.3.3 Computational results
 - 10.3.4 Alternative metrics
- 10.4 Evaluation using Hadamard Transform
- 10.5 Comparison with alternative methods.
- 10.6 Weakly constrained codes
 - 10.6.1 Weak $(0, k)$ codes

11 Dc-free RLL Codes

- 11.1 Introduction
- 11.2 Capacity of DCRL codes
- 11.3 Spectrum of maxentropic DCRL sequences
- 11.4 Examples of DCRL codes
 - 11.4.1 ACH-algorithm-based DCRL codes
 - 11.4.2 Dc-control: data level versus channel level
 - 11.4.3 Codes with parity preserving word assignment
 - 11.4.4 Zero Modulation .
 - 11.4.5 Miller-Miller code .
- 11.5 EFM revisited ..
 - 11.5.1 EFM
 - 11.5.2 EFMPlus
 - 11.5.3 Alternatives to EFM schemes
 - 11.5.4 Performance of EFM-like coding schemes

12 Further Reading

- 12.1 Selected literature.

13 Author's Biography

Bibliography
